

Organon Commitment

Narrative:

Organon aims to help girls and women achieve their promise and create better opportunities for themselves, their families and society by improving access to family planning information and contraceptives. We are working with partner organizations who provide education and training, to introduce and expand access to contraceptives that help secure her promise and equitable place in the world. In line with FP2030 goals, Organon plans to provide 100 million girls and women in low- and middle-income countries with affordable access to contraceptive options by 2030. Working together, through public-private partnerships, we aim to prevent an estimated 120 million unintended pregnancies by 2030.

Outcomes:

1. Provide access to ImplanonNXT to 100 million women in 73 low- and middle-income countries. This impact will be calculated using the MSI calculator.
2. Prevent 120 million unintended pregnancies (service lifespan).
